SUMMARY

Technical Business Analyst with 3+ years serving as the sole technical resource at growing businesses, owning requirements, analysis, and execution end to end across data tools, web products, and AI-enabled applications.

EDUCATION

Northeastern University, Boston, MA

May 2026

Master of Science in Information Systems

Relevant Coursework: Business Analysis & Information Engineering, Data Management & Database Design, Data Science & ML

Guru Gobind Singh Indraprastha University, New Delhi, India

September 2021

Bachelor of Commerce (Honors)

SKILLS

Analysis & Product: Requirements Gathering, Process Improvement, A/B Testing, Funnel Analysis, Stakeholder Management

Languages & Data: SQL, Python, JavaScript, TypeScript, R, Pandas, NumPy, Scikit-learn

Frameworks & Tools: React, Next.js, FastAPI, Supabase, PostgreSQL, MongoDB, LLM APIs

Workflow: Figma, Jira, Git, Postman, Jupyter, GitHub Actions, Google Analytics

PROFESSIONAL EXPERIENCE

Ferro Star, New Delhi, India

Technical Business Analyst

April 2022 – April 2024

- Delivered a React reporting dashboard adopted by 4 departments and leadership for daily pricing decisions
- Elicited ERP inventory requirements by interviewing dept leads, mapped workflows, and caught gaps before go-live
- Surfaced a MySQL query performance gap via usage analysis and validated 60% improvement after B-tree indexing
- Recommended reorder thresholds for SKUs based on depletion rate analysis, reducing excess stock orders by 15%
- Traced a 12+ hour weekly bottleneck to catalog inconsistencies and eliminated it by building Excel templates

Super Enterprises, New Delhi, India

Technical Business Analyst

April 2021 – March 2022

- Launched company website in HTML, CSS, and JavaScript, growing traffic to 8,000+ sessions and engagement by 35%
- Spotted a form drop-off, added validation and dynamic filtering, and cut incomplete submissions by 28%
- Found a manual notification bottleneck and cut response time from 24 hours to under 2 by integrating email APIs
- Audited 300+ SKUs for pricing and data inconsistencies, resolving errors undetected across manual records

PROJECTS

MatchRide | *Next.js 14, TypeScript, PostgreSQL, PostGIS, Supabase, Google Gemini AI, Vercel*

- Shipped a two-sided carpooling product end-to-end for 50+ users, owning scope, matching logic, and deployment
- Designed a matching algorithm balancing proximity, route overlap, detour cost, driver rating, and ride history
- Cut match query time to sub-second using PostGIS spatial indexes, replacing full-table distance scans
- Reduced LLM API cost by routing trip inputs through a heuristic pre-parser, invoking Gemini only when it failed

MatchWise | *Python, FastAPI, React, MongoDB, OpenAI API, GitHub Actions*

- Identified keyword-matching as a core failure mode and led product specs for a semantic matching system
- Validated AI approach achieving 45% higher match quality over keyword baseline through structured A/B testing
- Set success metrics including a 3-second response target and 40+ test scenarios, iterating on output

E-commerce Sales Data Analysis | *Python, Pandas, Matplotlib, Jupyter*

- Uncovered that top 3 months drove 47% of sales and 5 cities drove 58%, shaping inventory prioritization
- Quantified pricing elasticity: an 18% price cut drove 32% volume increase, informing markdown strategy
- Processed 10,000-record dataset, resolving 480+ missing values and applying IQR outlier treatment for analysis

Mental Health Wellness Platform | *React, Node.js, Express.js, MongoDB*

- Led product requirements for a mental health platform serving patients, therapists, and admins across 3 workflows
- Redesigned booking flow from 5 to 2 steps through requirements analysis, reducing completion time by 60%
- Evaluated appointment and session engagement metrics, surfacing UX improvements for next product iteration
